FOREST BIOME

DATE: OCTOBER 28, 2024

SECTION: BC3MD

I want forest biomes because they are vital ecosystems that support a vast array of plant and animal species, creating some of the highest levels of biodiversity on the planet. Forests act as natural air purifiers by absorbing carbon dioxide and releasing oxygen, which is essential for life. They also play a significant role in stabilizing the climate by storing large amounts of carbon and regulating water cycles, which helps to prevent extreme weather events like floods and droughts. Additionally, forest biomes provide resources such as food, medicine, and materials, and they offer recreation and cultural value that enrich human lives.
